

AUTO INSIGHTS

Alteryx Auto Insights

Built for Business Users

Alteryx Auto Insights is a cloud native analytics solution that automates the process of finding insights, so business users can make data-led decisions.

Industry and use case agnostic, Alteryx Auto Insights is much more than a visualization tool which typically requires a data analyst to be in the 'driving seat' creating charts or visualizations. Instead, Alteryx Auto Insights uniquely combines AI, Machine Learning & Data Visualization to deliver automated end-to-end insights for the business:

- **Data discovery** : No need to ask a question
- **Root Cause Analysis:** Dive deeper in an instant
- **Storytelling:** Insights that rival humans
- **Generative AI Acceleration:** Infused to speed workflow
- All automated, without any setup & build.

Why Now?

By automating insights in this way, it helps business users have the confidence to make data-led decisions themselves, driving data literacy across the organization, and freeing up data teams to focus on more strategic work.

How It Works

As a cloud-native SaaS solution, setup is easy. Connect your data and, in minutes, get critical insights so you're informed and ready to share with anyone on your team. No need to build a new workflow. And the best part? It works with Designer Desktop, Server and Cloud.

WITH AUTO INSIGHTS, YOU CAN:

Elevate teams with deeper insights and keep manual ad hoc analysis to a minimum

Resolve issues as they arise in meetings with evidence from data-led insights

Detect trends, patterns, and stories with direct-to-inbox insights, and pinpoint a root cause in a single click

“What I love most about Auto Insight is how quickly you can get to the insights. **The information is prescriptive.**”

Mrk Rodriguez

Director of Innovation

Ryan LLC

“Alteryx Auto Insights changes the way we operate and run our organization, so from a data perspective, **absolutely a game changer.**”
